How to read this report

This guide explains the status and performance metrics used in the EPDS availability report.

Overall status

Domains

Number of active monitored domains included in this report.

Healthy

Domains that are currently available with no active warning.

Warnings

Available domains with a recent issue, slow response, or certificate warning.

Down

Domains that are currently failing checks and may not be reachable.

Availability and response time

30d uptime

Percentage of successful checks during the last 30 days. Higher is better.

30d avg

Average response time during successful checks. Lower is better.

30d P95

95% of successful checks were faster than this value. Shows slow outliers.

30d incidents

Number of warning or outage periods detected in the last 30 days.

24 hour status history

Green means healthy, orange warning, red down, grey no data.

Security and PageSpeed

TLS

Days remaining until the HTTPS certificate expires.

Valid to

The date when the current HTTPS certificate expires.

Mobile performance

Latest Google PageSpeed performance score for mobile. 90+ is good.

Desktop performance

Latest Google PageSpeed performance score for desktop. 90+ is good.

7d trend

Change in the latest mobile score compared with the previous 7 day result.

LCP

Largest Contentful Paint: how quickly the main visible content loads.

Main issue

Most relevant PageSpeed improvement opportunity detected for the website.

Incidents

Last incident

Most recent detected problem or warning for this domain.

Last successful check

Most recent check where the website responded successfully.

Last failed check

Most recent check where the website was down or returned a critical error.

Last recovery

Most recent time the website recovered after an outage.

Recent incidents

Most recent incident periods, with root cause, time range, and duration.
